Overview

Setting up your AI agent coding tool with OpenRouter is straightforward. This guide walks you through it to simplify the process.

API key

Each team is provided with a team API key. This key is unique to your team and should not be shared outside your team.

1) Choose your AI agent coding tool

Pick a tool to use with OpenRouter. Options include:

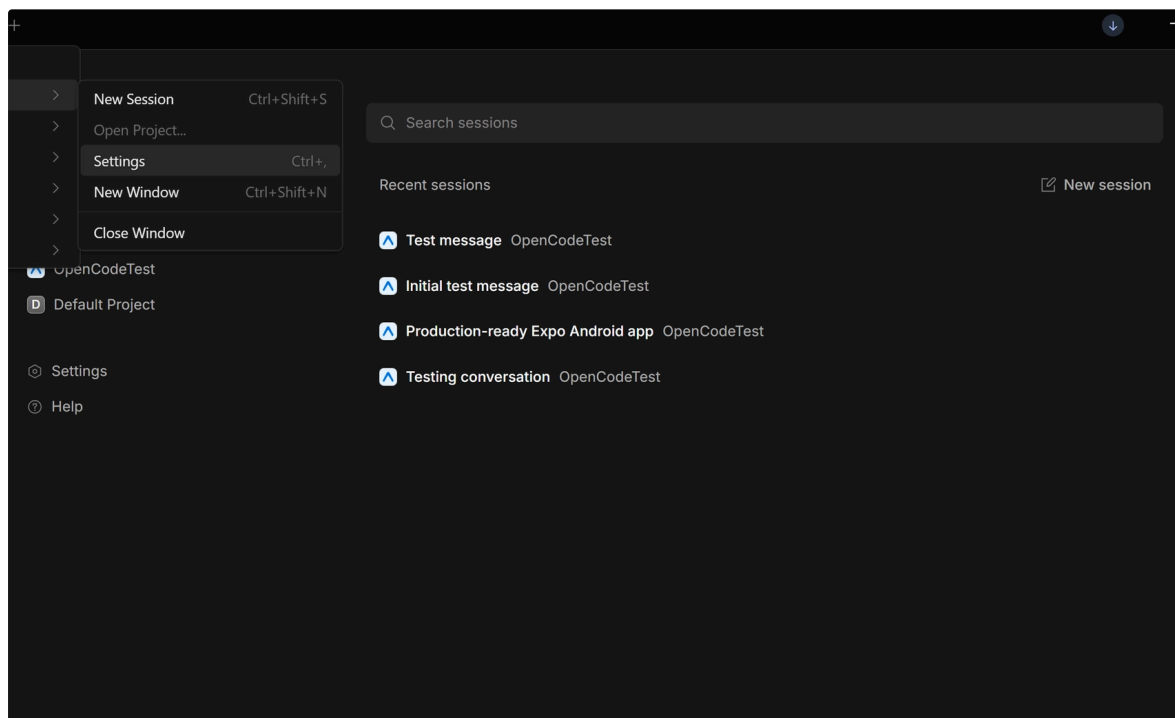

- OpenCode
- VSCode extensions
 - Kilo Code
 - Cline

2) Connect your OpenRouter API key

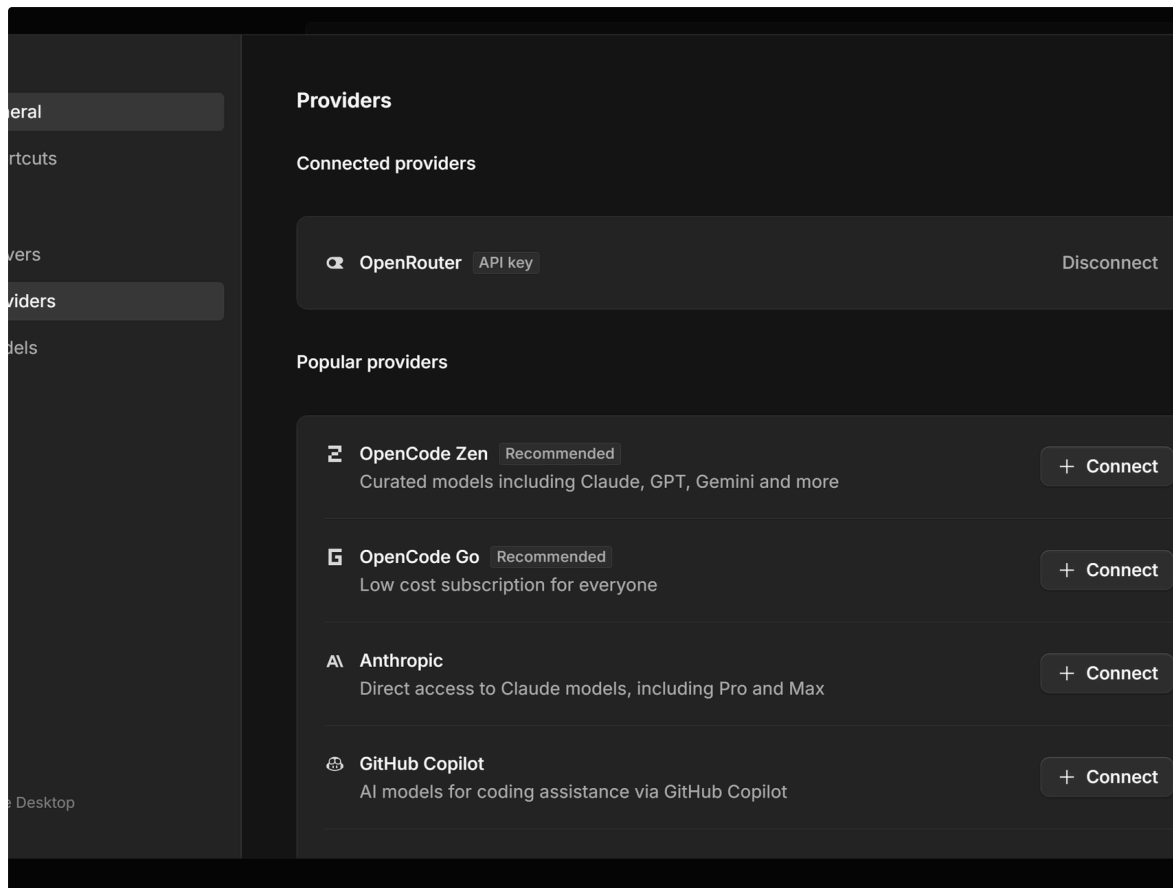

Once you've installed your tool, connect your OpenRouter API key in that tool's settings.

Example: OpenCode setup

1. Click the **Settings** button

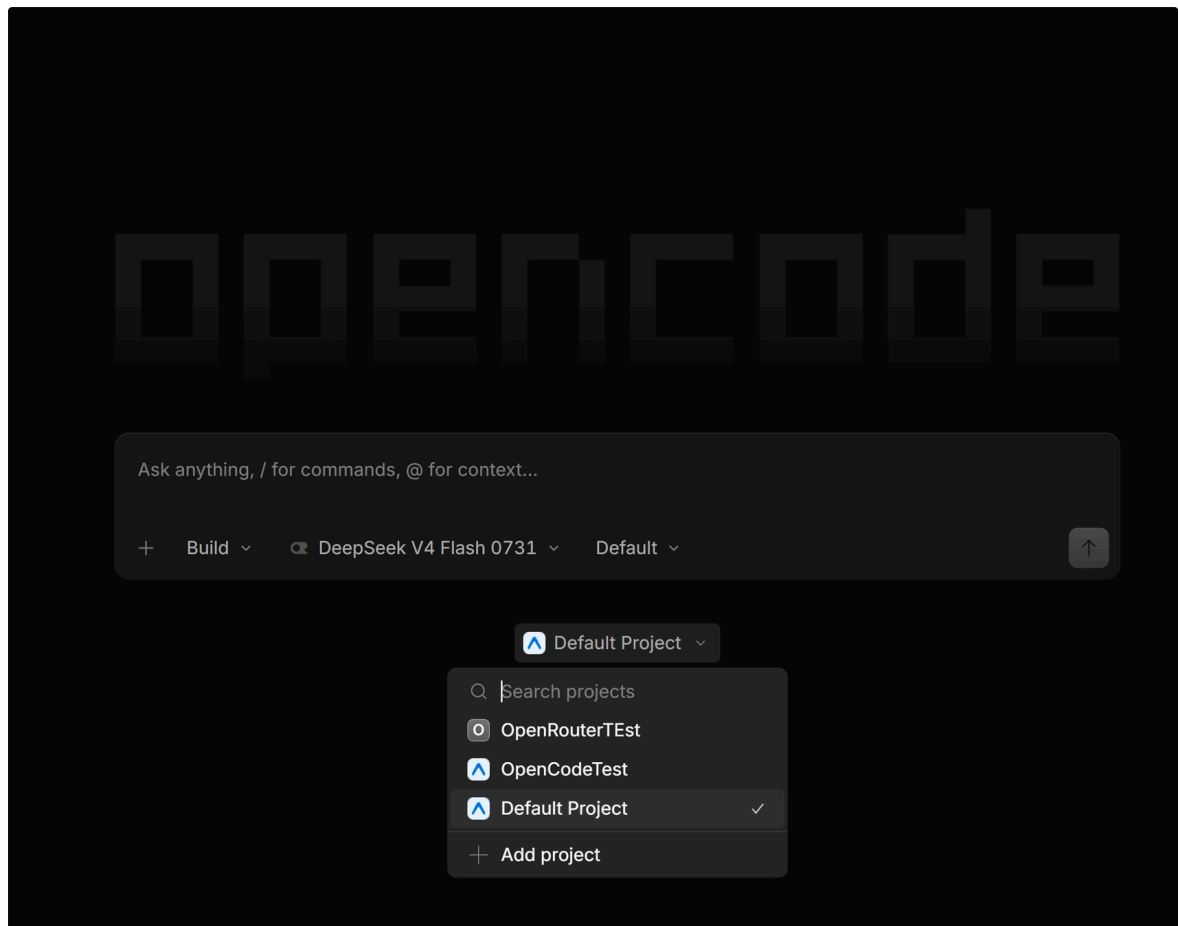

2. Click the models button and click the **+ Connect** for OpenRouter. Input your OpenRouter key and you are connected!

3. Create a session. Navigate to the home page and click **Add project** . **Create your project**

Note: For OpenCode, you need to create a project first before you start a session. The process of creating a project is just simply creating a folder.

4. Once you have entered a session, click the button as shown below to toggle your model
